

THE APU WITH POWER, PERFORMANCE, AND RELIABILITY

Go Green APU Buying Guide

Single Box Solution

- The Go Green APU is a self-contained, one box solution.
- This system does not integrate with the truck's engine; it is completely independent. Running a stand-alone unit will reduce wear and add years to the life of your truck's main engine.
- As a self-contained unit, the Go Green APU does not tap into the truck's coolant, HVAC, or exhausts systems. There are two important reasons for this: first, if the truck engine fails, the APU continues to provide heat, A/C, and power to the cab until assistance arrives; second, a problem with the APU will not result in the truck being disabled as well. Independence creates backup and piece of mind.
- Unit is enclosed and protected from the elements.
- There is no drilling of the cab back panel or roof.
- Mounting on the truck rail creates less vibration and noise to the cab.
- As an independent unit, the Go Green APU does not void OEM warranties.

Superior Engineering

- Very durable – the most reliable in the industry.
- The Go Green APU is reliable with a life expectancy of over 7 years.
- This system has been extensively tested under extreme conditions, using a test range from -40°F to 120°F.
- Very user friendly electronic controls.
- The Kubota engine is proven - quiet and water cooled.
- Easy to install and service – approximately 10 man-hours.
- We have the best warranty program in the industry.
- The Go Green APU is USA EPA Final Tier IV emissions compliant.
- The engine compartment has plenty of room for better serviceability.

THE APU WITH POWER, PERFORMANCE, AND RELIABILITY

Go Green APU Buying Guide

Key Characteristics

- The Go Green APU offers 110 AC power from a generator, and does not require an inverter.
- No need to manage power consumption with cab appliances as this system provides 4000 watts and 30 amps of household current.
- Plenty of air conditioning and heat are available on demand and within just a few minutes of turning the unit on for optimal driver comfort.
- Our unit reduces fuel consumption and main engine idle time by 80%.
- This system monitors the battery for low voltage and automatically recharges the battery.
- The unit maintains multiple monitoring shut-down sensors to protect the engine.
- For maintenance safety, the unit can be locked-out with a key switch to prevent accidental start-up while servicing.
- The Power Distribution Module (PDM) is a separate unit mounted securely in the cab away from engine heat and vibration which can create failures in the electrical system of the APU.
- Our unit has fault lights on the PDM for easy troubleshooting.
- Remote Key Start option as well as a Quiet Comfort Package available.
- Financing is available, making our unit very affordable.
